

## Bottom Head

**TOUGH. DEPENDABLE. PRECISE.**

In conjunction with Houston Forest Products, Key Knife developed the toughest, most effective drum style chipping head ever assembled. HY2 was designed to operate under the most challenging conditions, while maintaining the highest tolerances. No matter the wood species, dry or frozen, you can count on the HY2 to deliver superior finish, chip quality, and knife life.

If your bottom head is costing you valuable production time due to cant sticking and premature knife life you need to upgrade to HY2. HY2's 5 point clamping and mechanical fastening ensures the Ridge Knife XL (Extended Life) stays in place for a precise cut every time. No other bottom head can match the HY2's knife life, and ability to consistently produce a spline with plenty of clearance.

One more important detail...upgrading is risk free. Key Knife is so confident in the proven ability of the HY2 we guarantee its performance!

# HY2 Features

## 5 Point Knife Clamping

Significantly improves knife stability, for a precise and repeatable cutting action.

## Ridge Technology

Provides a smooth chip transition from knife tip to counterknife, greatly improving chip quality.

## High Capacity Radius

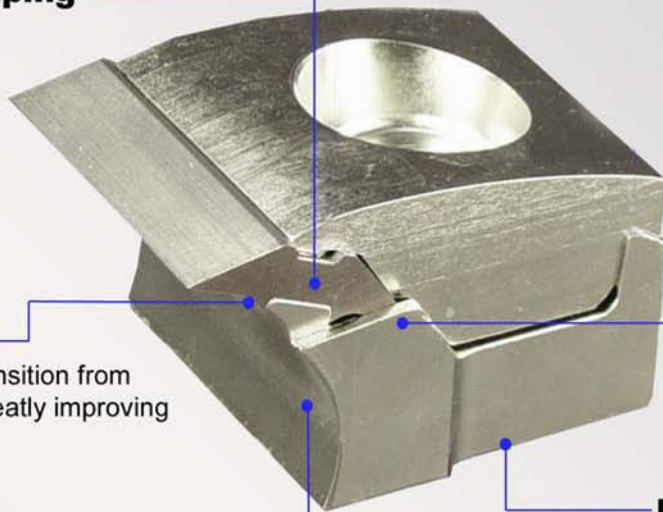

Reduces the force on the chip as it transitions to the expanded gullet, minimizing the break up of quality chips.

## Knife Stop

Securely holds both knife ends in place to eliminate knife twist for precise edge placement.

## Mechanical Fastening

2-3/8" dowell pins lock the knife assembly in place to ensure an accurate spline.

## HY2 bottom head benefits:

- Increased production
- Superior surface finish
- Improved chip quality
- Reduced cant sticking (caused by knife movement)
- Longer knife life (up to 2 times longer)

To increase the value of your wood products and lower operating costs upgrade to HY2 today!
