

SLICE XL

TOUGH. DEPENDABLE. PRECISE.

If your curve saw or reman is causing costly board defects due to excessive fiber pull and knot tear-out upgrade to SLICE XL. The smooth cutting action of SLICE Technology and use of the new Ridge Knife XL (Extended Life) ensures you will significantly reduce both fiber pull depth and knot tear-out, increasing the value of your lumber.

Key Knife designed SLICE XL to operate under the most challenging conditions, while maintaining the highest cutting tolerances. No matter the wood species, dry or frozen, you can count on SLICE XL to deliver superior finish, chip quality, and knife life.

One more important detail...upgrading is risk free. Key Knife stands behind the proven ability of SLICE XL with a no hassle guarantee. We are not satisfied until you are satisfied.

SLICE XL Features

5 Point Knife Clamping

Significantly improves knife stability, for a precise and repeatable cutting action.

Ridge Technology

Provides a smooth chip transition from knife tip to counterknife, greatly improving chip quality.

High Capacity Radius

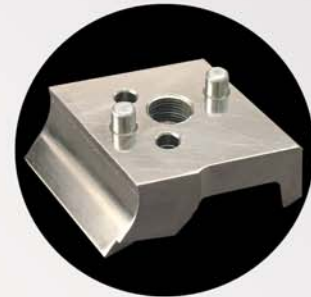

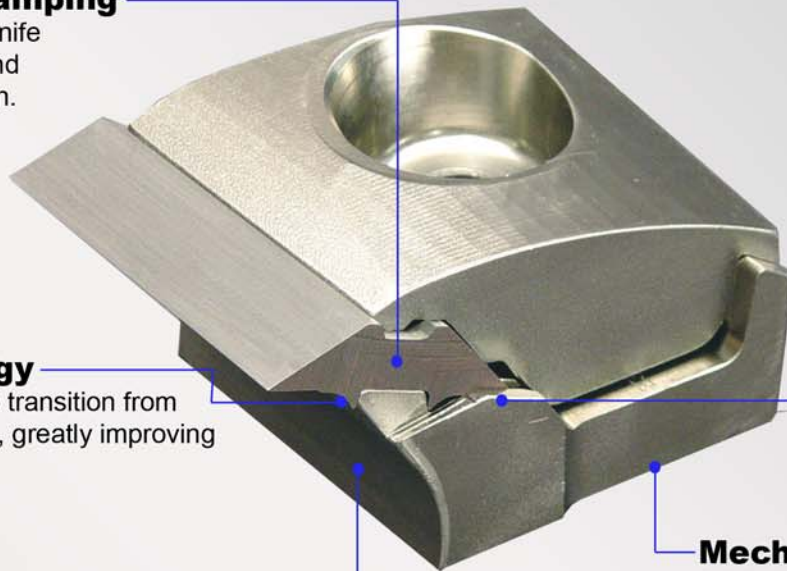

Reduces the force on the chip as it transitions to the expanded gullet, minimizing the break up of quality chips.

Knife Stop

Securely holds both knife ends in place to eliminate knife twist for precise edge placement.

Mechanical Fastening

2-3/8" dowel pins lock the knife assembly in place to ensure a precise cut.

SLICE XL benefits:

- Reduced fiber pull & knot tear
- Superior surface finish
- Improved chip quality
- Longer knife life (up to 2 times longer)

To increase the value of your wood products and lower operating costs upgrade to SLICE XL today!
